

“Regular surface maintenance is critical for the life-cycle performance of your structure.”

INTERIOR MAINTENANCE SERVICES INCLUDE:

- Power washing concrete walls and base plates with soluble salt remover
- Painting base plates with two-part primer, rust-stop and zinc-rich epoxy
- Asphalt emulsion spray on walls, covering cracks and equipment abrasions, providing chemical and physical barrier to salt
- Proper cover tensioning and torque settings
- Inspecting all bolt connections for proper torque settings
- Inspecting and tensioning end webbing / ratchets to proper specifications
- Inspecting and tightening all wind bracing cables
- Available for all salt and sand storage buildings

REJUVENATE YOUR SALT STORAGE BUILDING

To extend the life-cycle of your fabric structure, it is critical to get regular interior surface maintenance. Maintenance plans should be completed once following the installation of your structure, and once every five years thereafter.
